

### **defects and diffusion in pdf**

The effective diffusion coefficient (also referred to as the apparent diffusion coefficient) of a diffusant in atomic diffusion of solid polycrystalline materials like metal alloys is often represented as a weighted average of the grain boundary diffusion coefficient and the lattice diffusion coefficient. Diffusion along both the grain boundary and in the lattice may be modeled with an ...

### **Effective diffusion coefficient - Wikipedia**

Diffusion is the net movement of molecules from a region of higher concentration to a region of lower concentration. Diffusion is driven by a gradient in chemical potential of the diffusing species. A gradient is the change in the value of a quantity e.g. concentration, pressure, or temperature with the change in another variable, usually distance. A change in concentration over a distance is ...

where,  $L$  is the diffusion length of catalyst (half thickness of the slab),  $k$  is the reaction rate constant of catalytic reaction,  $\rho$  is the density and  $D_{eff}$  is the effective diffusivity of the molecules. Using the Thiele modulus, catalytic reactions with a porous catalyst have been classified into three types []: (1) reaction-control conditions ( $\bar{A}_s < 0.1$ ), (2) diffusion-control conditions ( $\bar{A}_s \dots$

Abstract. SUMMARY: In this article, the underlying theory of clinical diffusion MR imaging, including diffusion tensor imaging (DTI) and fiber tractography, is reviewed. First, a brief explanation of the basic physics of diffusion-weighted imaging (DWI) and apparent diffusion coefficient (ADC) mapping is provided.
