DNA is a long polymer made from repeating units called nucleotides. The structure of DNA is dynamic along its length, being capable of coiling into tight loops and other shapes. In all species it is composed of two helical chains, bound to each other by hydrogen bonds. Both chains are coiled around the same axis, and have the same pitch of 34 Å (3.4 nanometres).

The chemical structure of RNA is very similar to that of DNA, but differs in three primary ways: . Unlike double-stranded DNA, RNA is a single-stranded molecule in many of its biological roles and consists of a much shorter chain of nucleotides. However, RNA can, by complementary base pairing, form intrastrand (i.e., single-strand) double helices, as in tRNA.

The CRISPR-associated protein Cas12a (Cpf1), which has been repurposed for genome editing, possesses two distinct nuclease activities: endonuclease activity for processing its own guide RNAs and RNA-guided DNase activity for target DNA cleavage.

Today, research in the RNA world is a medium-sized industry. Scientists in this field are able to demonstrate that random sequences of RNA sometimes exhibit useful properties.

Microsynth uses proprietary synthesizer technologies to offer oligonucleotides of highest quality. Our state-of-the-art production facilities enable fast synthesis of standard primers, modified and functionalized oligonucleotides as well as (dual-) labelled probes. You benefit from a comprehensive variety of modifications, different quality levels and final preparation options.

What is evolution? Evolution is a result: heredity + variation "Descent with modification" Fact: evolution has occurred Began as a hypothesis Not falsified, though falsifiable Theory: evolution is a body of explanatory principles Embodies a mechanism: natural selection, itself a result of: Variation in fitness (ability to survive to reproduce)

As the highest-ranked open access journal in its field, Genome Biology publishes outstanding research that advances the fields of biology and biomedicine from a genomic and post-genomic perspective. Our responsive international editors provide excellent service and communication to authors throughout the entire publishing experience.
