

electronic excitations in organic pdf

A charge-transfer complex (CT complex) or electron-donor-acceptor complex is an association of two or more molecules, or of different parts of one large molecule, in which a fraction of electronic charge is transferred between the molecular entities. The resulting electrostatic attraction provides a stabilizing force for the molecular complex. The source molecule from which the charge is ...

Infrared spectroscopy exploits the fact that molecules absorb frequencies that are characteristic of their structure. These absorptions occur at resonant frequencies, i.e. the frequency of the absorbed radiation matches the vibrational frequency. The energies are affected by the shape of the molecular potential energy surfaces, the masses of the atoms, and the associated vibronic coupling.

As shown schematically in Fig. 1, EL in organic solids requires several steps including the injection, transport, capture and radiative recombination of positive and negative charge carriers inside an organic layer with suitable energy gap to yield visible light output. For simplicity we have drawn the spatial variation of the molecular energy levels in a band-like fashion, however, we have to ...

Young Awards. ISSS-8 Young Researcher's Awards will be offered in the following two categories on a competitive basis. Anyone 35 years old or younger on October 22, 2017 is encouraged to apply as eligible (the date of birth will be checked by passport or appropriate photo ID at the conference site). An application must be made in the website for abstract submission.
