Apart from this, the finite-volume method is very different from the finite-element method, beginning with the concept of elements, which are instead referred to as cells.

What is the difference between Finite Difference Methods

Finite-difference mesh $\Delta\epsilon$ Aim to approximate the values of the continuous function $f(t, S)$ on a set of discrete points in (t, S) plane $\Delta\epsilon$ Divide the S -axis into equally spaced nodes at distance ΔS apart, and, the t -axis into equally spaced nodes a distance Δt apart

Chapter 5 Finite Difference Methods

The Finite Element Method discretizes the region into elements and solves the resulting equations element by element solving these equations over the region. For many cases one can map between the Finite

Difference formulation and the Finite Element formulation.
